

ENVIRONOC 301- Capabilities

301 Contains 29 species various strains, some include:

- *Bacillus (9) amyloliquifaciens, cerus, subtilis*, are a few. Specialized Starch and Protein degradation skills.
- *Pseudomonas (4)*- Lipid, Starch, Protein Specialized degradation skills
- *Other Specialized Species*- Abilities to degrade cellulose and complex polymers, simple sugar breakdown capabilities, Ammonia degrading microbes facilitating nitrification and denitrification process, and Specialized Microbes that have abilities to degrade and reduce H₂S (*Hydrogen Sulfide- a colorless gas known for “rotten egg” smell and associated with waste water treatment*)
