

Using THE POWER OF MICROBES

ENVIRONOC 301 Liquid Inoculant-Specialized Degradation of simple/complex organics in wastewater, grease control, reduction of hydrogen sulfide and other odors, algae control in ponds and aquaria

- 29 Strains of Fresh, Viable, and Natural Microbes selected for their capabilities to handle Degradation of "common" organics in wastewater, Reduction of grease and hydrogen sulfide
- Highest Plate Counts- Trillions of viable microbial cells per gallon delivered straight from Biodyne-Midwest to your location.

Capabilities: Degradation of "common" organics in wastewater, Reduction of grease and hydrogen sulfide for odor control

Applications: Reduced BOD, COD, sludge, grease and hydrogen sulfide in WW and collections systems, Waste and odor control in Animal cultivation, Reduced grease in restaurants, food preparation and processing facilities that lead to excessive pumping, line plugging and odor, Improved performance of septic tanks and drainfields, Algae control in aquaria and ponds

Who is Biodyne-Midwest?

- Located in Indiana, Biodyne-Midwest is the exclusive partner of Biodyne Inc. We are an innovative Environmental Biotechnology firm, intent on harnessing the power of naturally occurring microbes for environmental applications
- Biodyne-Midwest cultivates and distributes the highest quality liquid microbial inoculant to customers throughout the USA
- ENVIRONOC microbes are comprised of 100% naturally occurring (non-pathogenic or genetically modified) bacteria / fungi that have been selected for their special degradation or biostimulation abilities
