

Using THE POWER OF MICROBES

ENVIRONOC 401 Liquid Inoculant- Broad benefits for many plants including: healthier roots, stronger and longer stems, increased flower / fruit production, better phosphorus uptake, reduced nitrogen fertilizer needs

- 29 Strains of Fresh, Viable, and Natural Microbes selected for their capabilities to provide enhanced plant health and production through enhanced rhizosphere (root microenvironment) activities
- Highest Plate Counts- Trillions of viable microbial cells per gallon delivered straight from Biodyne-Midwest to your location.

Capabilities: Phosphate-solubilizing microbes and nitrogen fixing microbes reduce fertilizer needs, Enhanced leaf, flower and fruit production via rhizosphere microbe activities

Applications: Enhanced growth of many leafy vegetables and root crops, Enhanced growth of many flowering plants, Home and commercial lawn application for general health and reduced fertilizer needs, Golf course greens, fairway and landscape amendment for healthy root systems and reduced fertilizer

Who is Biodyne-Midwest?

- Located in Indiana, Biodyne-Midwest is the exclusive partner of Biodyne Inc. We are an innovative Environmental Biotechnology firm, intent on harnessing the power of naturally occurring microbes for environmental applications
- Biodyne-Midwest cultivates and distributes the highest quality liquid microbial inoculant to customers throughout the USA
- ENVIRONOC microbes are comprised of 100% naturally occurring (non-pathogenic or genetically modified) bacteria / fungi that have been selected for their special degradation or biostimulation abilities
